## Change in Disinfectant

Monday, January 10, 2022, we will change back to our primary disinfectant, chloramines, which are a mixture of chlorine and ammonia as prescribed by the Safe Water Drinking Act of the Federal EPA. We requested and were granted permission by Louisiana Department of Health to change to free chlorine right after Hurricane Ida to assure the drinking water safety. The free chlorine has done its job and we feel confident that this change will only enhance the safety of your drinking water.

So how does this change affect you? Not at all. Your water will continue to be monitored as always to assure its safety and quality. You may notice that the smell of chlorine is less than before but that's it. The water will remain safe for human consumption.

You may visit our website, [www.tpcw.org](http://www.tpcw.org), or visit the Louisiana State Department of Health's website, [www.la.gov.org](http://www.la.gov.org), for a more detailed explanation of chloramines in the drinking water. We are always available to discuss at greater length your concerns or questions. Please feel free to contact us.

Please like, share and follow us on social media for up to the minute news and announcements concerning your drinking water. Thank You.

Michael A. Sobert
