CHANGE IN PRIMARY DISINFECTANT CHLORAMINES

On Saturday, July 27, 2024, we will change back to chloramine which is a mixture of chlorine (4 parts) and ammonia (1 part) as our primary disinfectant. In accordance with our approved Nitrification Plan the purpose of the change has been met. The water will continue to be monitored to ensure its compliance with all required standards. This change will NOT affect the quality of the water.

You may visit our website, www.tpcw.org, or visit the Louisiana State Department of Health's website, www.la.gov.org, for a more detailed explanation of free chlorine in drinking water. We are always available to discuss at greater length your concerns or questions. Please feel free to contact us.

Please like, share, and follow us on social media for up to the minute news and announcements concerning your drinking water. Thank you.

Michael A. Sobert
